DETAILED ACTION

Specification

1. The abstract of the disclosure is objected to because the abstract is less than 150 words. Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1,3 are rejected under 35 U.S.C. 102(b) as being anticipated by Fukuma et al (US 4,796,945).

Regarding claim 1, Fukuma discloses a fundus camera for photographing a fundus of an eye to be examined, the camera comprising:

A fundus observation/photographing optical system having an objective lens (4) and a diaphragm (7/8a) arranged in a position approximately conjugate with a pupil of the eye with respect to the objective lens, for observing and photographing the fundus via the objective lens and the diaphragm;

An optical path bifurcating member (5);

An anterior segment observation optical system (col. 6, lines 35-45);

A correction member (11-col. 4, lines 1-15; see figure 1).

Regarding claim 3, see figure 1 and col. 3, lines 1-20.

Allowable Subject Matter

4. Claims 2,4-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Yoshi (JP 2000-005131) discloses an alignment system in a fundus camera; and Aizu (US 5,116,116) discloses a optahalmological diagnosis system.
